

Installation Guide for proTextor

Saving lives one text at a time

After receiving your email with the proTextor installer i.e. ProtectorInstaller.CAB you will need ActiveSync to install proTextor on your Windows Mobile device.

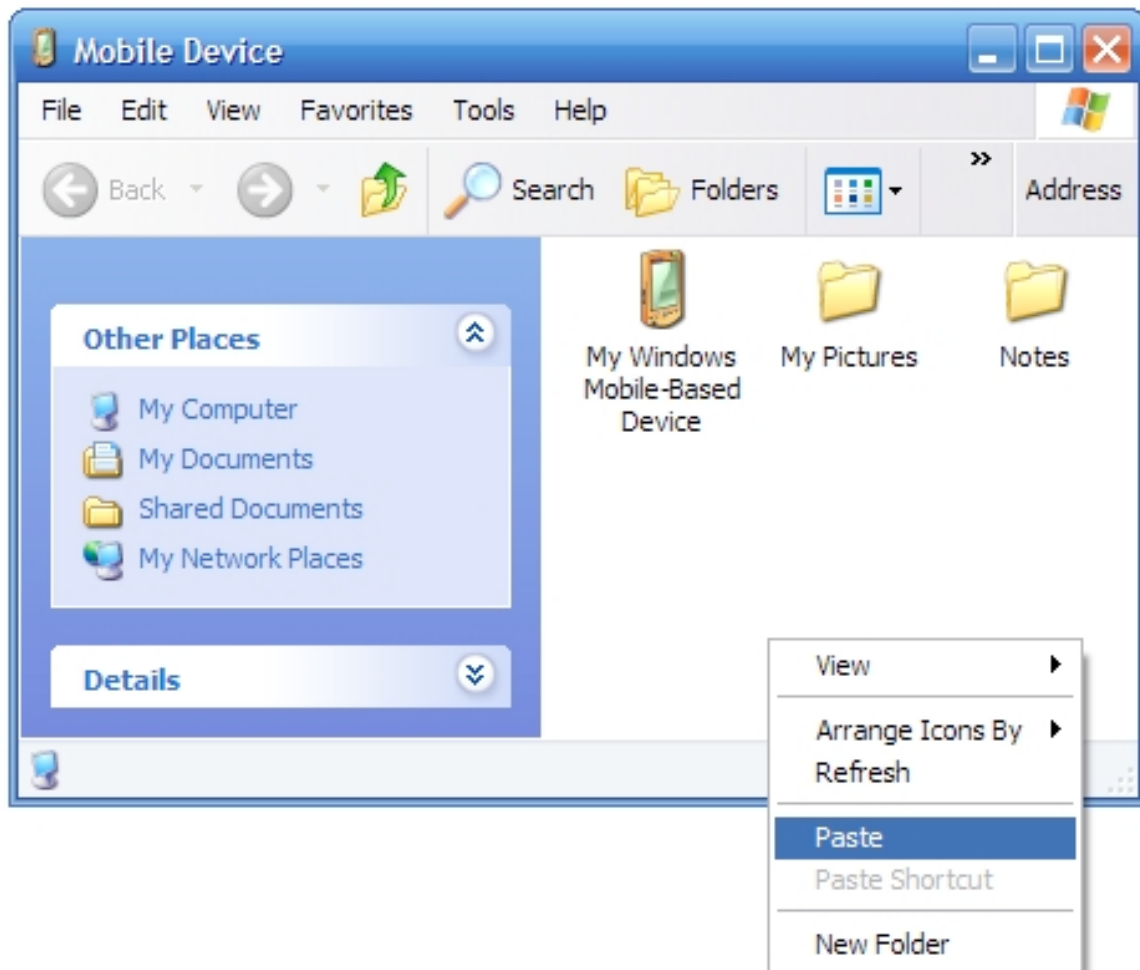

Step 1

The first step is to move the ProtectorInstaller.CAB installation file you downloaded to your Smartphone. First, sync the Smartphone with your Windows PC. After synchronization, select the *Explore* feature from ActiveSync's main screen.

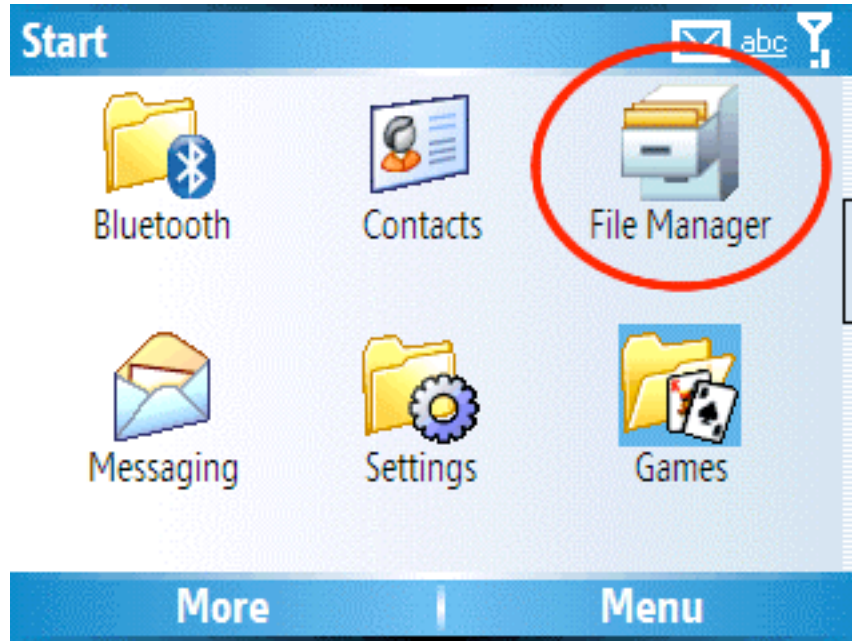

Step 2

The *Explore* feature allows you to browse your Smartphone's internal storage like you would browse your computer's hard drive(s) in *My Computer* or *Windows Explorer*. Once the *Mobile Device* explorer window is open (see below), go to wherever you downloaded the *ProtextorInstaller.CAB* file. Right-click it. When the menu drops down, select *Copy*. Return to the *Mobile Device* explorer window, right-click somewhere in the window, and select *Paste*:

Step 3

ProtectorInstaller.CAB file will be copied to the Smartphone. Allow this process to complete. Disconnect your Smartphone's sync cable. On your Smartphone, open File Manager in the Start Menu:

Step 4

Find the ProtectorInstaller.CAB file you copied to your device in *File Manager*. If you followed the instructions above, the file will be located in your *My Documents* folder. When you find it, select it.

Follow the onscreen instructions (If prompted you want to install proTextor to your Device rather than a Storage Card). Select "Yes", if the installation prompts you that it is from an unknown publisher.

The ProtectorInstaller.CAB file will unpack and install itself on your Smartphone and add the proTextor icon to the Start Menu.

To **uninstall** proTextor, go to "Start > Settings > System > Remove Programs" and select the JJT Web Consulting proTextor to uninstall.
